Dipka OCP

Mine Annual Performance & Operational Report

Financial Year 2021-22

Report ID	GV-DIPKA-OCP-202122-ANNUAL
Mine ID	GV003
Subsidiary	SECL
State	Chhattisgarh
Coalfield	Korba Coalfields
Mine Type	Opencast
Dataset Classification	SYNTHETIC_DEMO
Prepared For	GeoVault AI RAG / analytics demonstration

Important: This is a synthetic demonstration report generated from the GeoVault synthetic dataset. It is designed for ingestion, retrieval, analytics, evidence citation and report-generation testing. It is not an official Coal India Limited, CMPDI or subsidiary publication.

1. Executive Summary

During FY 2021-22, Dipka OCP recorded actual coal production of 29.80 MT against a target of 32.00 MT, corresponding to achievement of 93.12%. The production variance was -2.20 MT. Year-on-year production growth was 9.36% compared with the preceding financial year. The corresponding offtake was 28.76 MT against an offtake target of 31.52 MT, with offtake achievement of 91.24%. This production/offtake profile provides the primary operational baseline for GeoVault analysis.

The principal recorded operational constraint for FY 2021-22 was OB removal and crusher/conveyor maintenance constrained coal evacuation.. The dataset records 12 rainfall-impact days and 152 hours of equipment or operational downtime. Equipment availability was 93.6%, while available manpower was 820. These indicators should be interpreted together rather than treating any single metric as a definitive causal explanation. GeoVault should surface the stated cause alongside the supporting operational indicators so that an analyst can inspect the evidence.

2. Mine Profile

Attribute	Value
Mine	Dipka OCP
Mine ID	GV003
Subsidiary	SECL
State	Chhattisgarh
Coalfield	Korba Coalfields
Mine Type	Opencast

Dipka OCP is represented in GeoVault as a structured mine entity linked to annual performance records. The profile establishes stable metadata—subsidiary, state, coalfield and mine type—that can be used for filtering, authorization scope and retrieval. Annual metrics are stored separately so that queries such as production trend, target achievement or year-over-year growth can be computed across financial years.

3. Production Performance

Metric	Value
Production Target (MT)	32.00
Actual Production (MT)	29.80
Production Variance (MT)	-2.20
Achievement	93.12%
Previous-Year Production (MT)	27.25
YoY Growth	9.36%
Average Daily Production ('000 t/day)	81.64

During FY 2021-22, Dipka OCP recorded actual coal production of 29.80 MT against a target of 32.00 MT, giving achievement of 93.12%. Year-on-year production growth was 9.36%. The variance is retained as an explicit metric for analytical ranking and investigation.

4. Target vs Achievement

Measure	Target	Actual	Achievement
Coal Production (MT)	32.00	29.80	93.12%
Coal Offtake (MT)	31.52	28.76	91.24%

Measure	Target	Actual	Achievement
OB Removal (McuM)	67.84	65.26	See annual record

For FY 2021-22, coal production achievement was 93.12%, while offtake achievement was 91.24%. Production variance was -2.20 MT. GeoVault should preserve these measures independently so that an analyst can distinguish production performance from dispatch performance.

5. Offtake & Dispatch

Actual offtake for Dipka OCP was 28.76 MT against an offtake target of 31.52 MT, corresponding to 91.24% achievement. Offtake is stored separately from production because coal produced at the mine and coal dispatched/off-taken are operationally distinct measures. This distinction supports precise SQL and RAG answers.

6. Overburden & Stripping Ratio

Indicator	Target	Actual
Overburden Removal (McuM)	67.84	65.26
Stripping Ratio	2.12	2.19
Rainfall Impact Days	—	12

The FY 2021-22 record shows an actual stripping ratio of 2.19 against a target of 2.12, with 12 rainfall-impact days. Actual overburden removal was 65.26 McuM against 67.84 McuM. These indicators provide operational context but should not be treated as automatic proof of causality.

7. Equipment & Productivity

Indicator	Value
HEMM Availability	92.00%
Equipment Availability	93.60%
Downtime Hours	152
Manpower Available	820
Average Daily Production ('000 t/day)	81.64
Equipment Constraint	N/A

Equipment availability was 93.60% and HEMM availability was 92.00%. The record contains 152 downtime hours and manpower availability of 820. These measures are retained as supporting evidence for production-performance analysis.

8. Operational Constraints

The primary operational cause/constraint recorded for FY 2021-22 is **OB removal and crusher/conveyor maintenance constrained coal evacuation..** Supporting indicators include 12 rainfall-impact days and 152 downtime hours. GeoVault should distinguish this recorded cause from analytical inference and cite the underlying mine-year evidence.

9. Geological Observations

Highwall stability monitoring in active sections.

The geological observation is stored as a narrative field for semantic retrieval. In a production deployment, such observations should be linked to the originating geological report, section/page and relevant mine-plan or exploration evidence.

10. Safety Performance

Indicator	Value
Safety Incident Count	9
LTIFR	0.40
Fatalities	0

Safety performance for FY 2021-22 includes 9 recorded safety incidents, LTIFR of 0.40, and 0 fatalities in the synthetic record. These indicators are presented separately from production and environmental performance.

11. Environment & Mine Reclamation

Indicator	Value
Reclamation Area (ha)	26.00
Mine Water Treated (ML)	14.60
Dust Compliance	98.40%

Environmental indicators include 26.00 ha of reclamation, 14.60 ML of mine water treated and 98.40% dust compliance. These measures can support authorized environmental dashboards and cross-year trend analysis.

12. Key Operational Event

Heavy rainfall and water accumulation affected pit access.

13. Management Observations & Recommended Follow-up

Recommended analytical follow-up is to compare production achievement (93.12%) and offtake achievement (91.24%) with equipment availability (93.60%), downtime (152 hours), stripping ratio (2.19), and the stated operational constraint. Any management recommendation produced by GeoVault should remain a draft for human review and retain evidence references.

14. Source / Provenance Statement

All numeric and narrative values in this demonstration report originate from the GeoVault synthetic demonstration dataset. The corpus is intended for testing ingestion, chunking, SQL analytics, RAG retrieval, evidence grounding, citation, topic identification and report generation. It must not be represented as official CIL/CMPDI data. The underlying records are marked SYNTHETIC_DEMO.
